ELLS Summer School Program

June 24 - 30, 2025 Field Excursion
Online Learning the Week Prior

The main objective for this summer school is to design eco-tourism trails and propose program areas that focus upon archaeology, history, biodiversity, and sustainable design elements.

We have selected the exciting location of Konitsa and the Vikos-Aou Geopark in northwest Greece. Konitsa is close to the town of Ioannina in Epirus, Greece.

This Summer School aims to investigate how the dynamic landscape characteristics – topography, river valleys, and cultural history – are managed and how each relate to the land and the people who inhabit this area today, with particular emphasis on eco-tourism experiences, ancient history and the modern-day culture of this unique region of Greece. The ELLS Subject Area Landscape Architecture and Spatial Planning LASP are leading this summer school.

Students

Students should be ready to enter their final year of bachelor study or have complete their first year of graduate studies. Trans-disciplinary teams with students of various disciplinary studies from various parts of the world and the ELLS partner network are encouraged to apply. PhD students are also encouraged to participate.

Due to limited budget and the available onsite accommodations, enrollment will be limited to 12 students.

Previous Knowledge

Some basic skills in outdoor recreation, parks, ecotourism, and landscape architecture are recommended.

Application

The start of the online application is February 2025. There are no application fees.

Applicants must submit a statement of motivation for why they wish to participate in this unique and dynamic summer school program and respond to specific questions related to their academic background, research objectives, and particular qualifications.

The application deadline is May 1, 2025

7.5 ECTS Credits

English will be the language used.
